HYDRO CLEANER  
Art. 024-000-00755

HYDRO CARE  
Art. 024-000-00753

# CARE INSTRUCTIONS

## For natural oiled floors

Oil impregnated floors offer good protection against exposure to dirt and liquids. Cleaning and maintenance of your floor is easy.

- 1. Dry cleaning**
  - The best way to remove loose, coarse dirt (e.g. dust and sand particles) is the regular use of a soft brush or vacuum cleaner.
- 2. Routine cleaning**
  - After dry cleaning, clean your floor with a vinegar solution (1:20) and a slightly damp cloth. Allow to dry and you are done.
  - If the vinegar solution does not produce satisfactory results, we recommend to use our HYDRO CLEANER instead. The HYDRO CLEANER is diluted with warm water (1:10) or applied with a soft cloth in concentrated form to smaller areas. HYDRO CLEANER is a wax-remover. We recommend application of HYDRO CARE after use to create a new protective layer.
- 3. Care**
  - HYDRO CARE creates a protective film and provides long-term protection if used regularly.
  - Apply HYDRO CARE with a standard household mop after thoroughly cleaning with HYDRO CLEANER. HYDRO CARE is diluted 1:50 with water and applied to the floor with a slightly damp cloth. Allow to dry and you are done.
- 4. Touch up**
  - Recoating with NATURAL OIL CARE freshens your floor, restoring the silky sheen. NATURAL OIL CARE should be applied in thin coats using a soft cloth or pad, avoid applying in thick coats.

**IMPORTANT NOTE** Oil-soaked cloths / pads must be immersed in water to avoid spontaneous combustion.

When applying cleaning and care products to your floor please take care to avoid standing water. This will damage your wood flooring (swelling).

Use the dry clean method on recently treated NATURAL OIL CARE finished floors for the first few days. Avoid water.

Do not use any microfiber mops, it may scratch your wood floors.

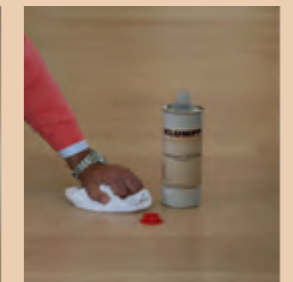

1. Dry cleaning with vacuum cleaner or soft brush

2. Routine cleaning with HYDRO CLEANER or vinegar-water

3. Care with HYDRO CARE

4. Touch up with NATURAL OIL CARE
