

## Letter of Confirmation

for products that undergo changes in classification  
and labeling under REACH and CLP

This declaration is to confirm that the relevant processing parameters, chemical composition and physical properties of our products are consistent with the previous delivery by monitoring our manufacturing process and applying quality assurance.

Due to the registration of the chemicals under REACH and regular amendments it is possible that our suppliers have to change the labeling of the raw materials. The combination of various regulations of occupational safety, consumer and environmental protection can lead to restrictions or even bans of some chemicals. Consequently, the labeling of the chemicals listed under section 3 in the material safety data sheet (MSDS) can vary although the composition of the formulation did not change.

With the implementation of CLP the obligations of our company arise from its role as a downstream user: Our products are classified, labelled and packaged in accordance with this regulation before placing them on the market. If the product contains substances falling into the so-called harmonized classification (Annex VI), the use of this classification is legally required. For the substances pertaining to the minimum classification we adopt the classification of the manufacturer or the importer as they have additional information that can lead to a stricter classification compared to the minimum classification. Further, we adopt the self-classification of the actors in upstream processes of the supply chain if there is no harmonized classification for this substance. We provide the information to the recipients, if the product contains at least one substance on the Candidate List and the individual concentration of this substance in the mixture is  $\geq 0.1\%$  (w/w).

We are committed to ensuring that current data is maintained in the MSDS and all products are classified and labeled according to CLP. Our updated MSDS inform you about the most recent developments. We will approach you immediately in case of unexpectedly introduced raw material bans in order to find a fast solution. Our aspiration is to consistently provide premium quality products and exceed the expectations of our customers.

If you have any questions about these topics or require further information, please feel free to contact us.
