

EASY PROCESSING

- + Can be applied on all common UV lines (open pore)
- + Water borne, tinted imitates the natural wood color
- + The above tinting leads to an equalization of inhomogeneous wood batches
- + Highest stability of the viscosity (no running thick in all climate zones)
- + Stable and constant gloss all-over the surface

TECHNICAL PROPERTIES

- + Color and open pore effect almost like untreated, raw wood (e.g. oak)
- + Gloss effect like uncoated (3-5 units @ 60° and 6-10 units @ 85° measuring angle)
- + Soft and silky touch like raw wood
- + Highest chemical resistance, especially against coloring agents (red wine, coffee, black currant juice, etc.)

ADDED VALUE

- + Emphasizes the natural beauty of (raw) wood
- + Provides the look and touch of an untreated wooden floor, providing the wear and tear as well as chemical resistance properties of a full-fledged UV-coated surface
- + Easy-to-clean

RAW WOOD EFFECT

Our UV-Oil system provides the look and touch of fresh cut wood
