

2C INDUSTRIAL PUTTY

...highlights and fills cracks and knotholes of rustic types of wood.

EASY PROCESSING

- + Suitable for automatic mixing on industrial mixing equipment (e.g. Decumed)
- + Applicable also by fully automatized application systems
- + Automatic mixing process
- + Homogeneous mixing of the two components, constant viscosity and exact dosage
- + Minimal loss of material
- + Long pot life
- + Directly stackable after UV-curing
- + Sandable and processable after curing (6-7 hours)

TECHNICAL PROPERTIES

- + No entrapped air after mixing the components
- + No shrinkage
- + High filling capacity
- + Structurable
- + Best adhesion and high flexibility
- + Long pot life of approx. 30 minutes (conventional systems only ~5 minutes)
- + Environment friendly, free of solvent and styrene
- + Available in many colors

ADDED VALUE

- + Highly wear and tear resistant surface
- + Design element for product differentiation
